NEXRAVE

Your social night life made simple.

Problem:

- NO Reliable way to verify if someone was truly invited at a glance
- NO Discrete yet efficient way for a host to interact with everyone at the events
- NO Accurate profile of the invitees and their likelihood to show up
- NO Accurate feedback before, during, or after, that will significantly improve the quality of events

Solution:

- Welcome to Nexrave!

Security

Invitation Hierarchy
Ticketing System

Data

Attendance Projection
Live Updates
Feedback from Guest

Efficiency

Updates from the Host
List Integration

User

Individual User
Attendance Rating

Security:

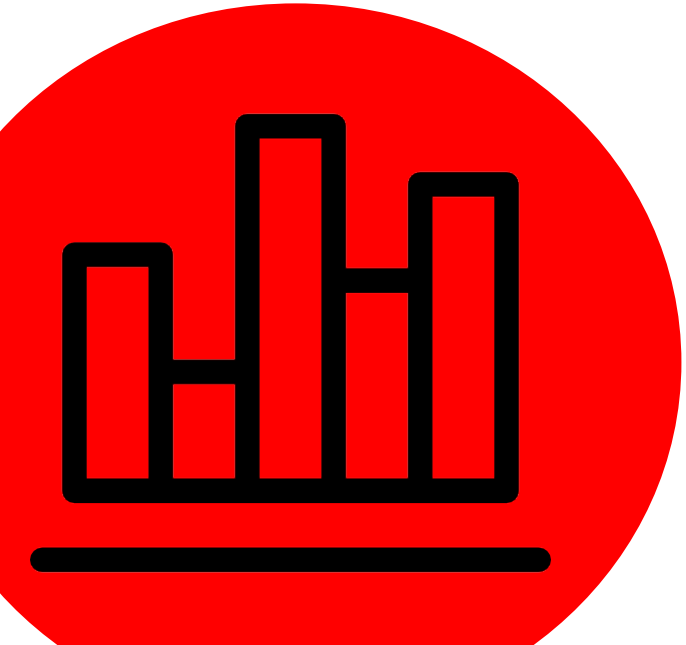
Invitation Hierarchy -

- Control who gets to send out Secondary Invites
- Control how many Invitations any User can send

Ticketing System -

- At the door authentication with QR Code Tickets
- Built in security measures to prevent counterfeits
- Clearly see who invited guest on ticket

Data:



Attendance Projection -

- Get Accurate Crowd Predictions weeks ahead
- Demographics of the crowd

Live Feedback -

- Information about the crowd as they show up

  - Live feedback on crowd size

  - Live feedback on crowd trends

Feedback from Guest -

- Guest can Rate and Comment on the event

Efficiency:

Updates from the Host -

- Send a push notification to everyone at the party

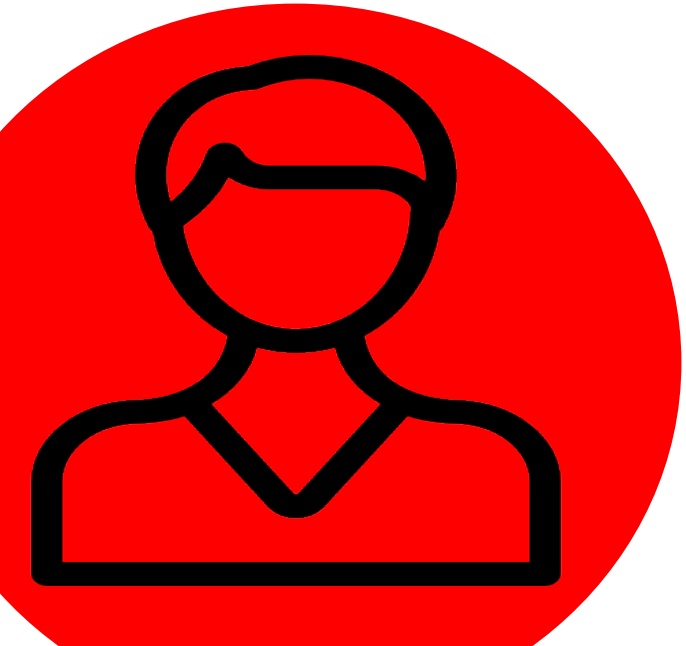
  - Emergency Updates

  - Streamline Guest Departure

List Integration-

- Seamlessly integrated with Facebook Events
- Recyclable List from Previous Events

User:



Individual User Attendance Rating-

- LOA Rating System (Likelihood Of Action)

  - Probability of Attendance After Invitation is Accepted

  - Probability of Response to Particular Venues

- Users can be Flagged by Host and other Guests

- Visible to Individuals Users and Host
